## Turn IT into a store.

Simplify routine IT operations through workflow automation and self-service provisioning.

### The Risk of IT Exposure

*Is your company vulnerable to the threats within? It might be, unless you've deployed an identity and access management solution with risk capabilities. The fact is, many of the routine tasks an IT professional is charged with — like terminating a former employee's network access or identifying which employees have access to sensitive systems — can put an entire organization at risk if mismanaged or not managed quickly enough.*

*Eliminate risk. Return accountability to business users. Control the threats within.*

**“** The automated workflow has put accountability in the hands of users rather than IT. Identity Enforcer is the most revolutionary identity and access management application ever.

**Ryan Ward,**  
Technical Security Manager, MillerCoors

### Solve Your Business Processes with an IT Store

As today's businesses grow, so too do their applications, devices and, of course, headcount. Managing these applications and devices and all corresponding users— whether onboarding, supporting or deactivating them — is an overwhelming task falling squarely on the shoulders of already overburdened IT and help desk professionals. Overseeing it all across multiple sites and divisions complicates the challenge. By moving identity and access management to the actual users, IT can focus on more critical business issues.

See and index everything you manage by building an actionable business services catalog in the form of a graphical IT Store. Using a self-service model (and the world's first IT Store for identity and access management), trusted business users manage their requests for access and assets, groups and distribution lists. Avatier's Identity Enforcer and Group Requester are the industry's only user provisioning products that deliver the kind of functionality that relieves today's IT and help desk professionals. Routine IT operations — from increasing mailbox size to deleting expired groups — are streamlined and expedited. Most importantly, risk is lowered and resources are protected. Identity and access management will never be the same.

## HRIS Driven User Provisioning with IT Asset Management

Improve business operations by automating identity management.

Identity Enforcer puts access risk accountability in the hands of the trusted business user. Using the world's first IT store for access management, users can order the IT services they need through an integrated online Web store. This means even the most common tasks are automated— whether it's a request for access, assets or applications— to reduce risks, thereby, freeing IT to focus on other business-critical issues.

Identity Enforcer addresses de-provisioning tasks as well, providing the perfect solution to manage user termination risk. Upon termination, Identity Enforcer automatically disables access across all systems, ensuring the integrity of your company remains intact.

## Manage Groups with Self-Service User Access Control

Stop group sprawl and manage IT risk.

For those who don't have the time or the resources to set up an IT store or don't need automated user provisioning, Group Requester represents a brand-new approach to access risk management by reassigning group management tasks to the business user, ultimately eliminating group sprawl and lowering access risk. As an innovative self-service request system, Group Requester addresses all group and distribution list tasks in an organization, including deleting expired groups, establishing group ownership, adding groups and requesting memberships.

By shifting the responsibility of group management tasks to business users, Group Requester improves security through workflow accountability, and unburdens your IT department.

### Features

#### IT Store.

See and index everything you manage by building an actionable business services catalog in the form of a graphical IT Store. With Identity Enforcer, any user can complete tasks like user provisioning, asset allocation and application access. It's as easy as shopping online.

#### Self-Service Request.

Eliminate delays in provisioning resources by returning identity and access management tasks to the user. Identity Enforcer's self-service model presents a whole new way for users to request access, assets, applications and more.

#### Automatic Workflow.

Place accountability with business users. Identity Enforcer's patented automated workflow enables users to "shop" for resources, while giving the appropriate management control over approvals. Provisioning transactions work just like shopping online.

### Features

#### Group Expiration.

Eliminate group sprawl by setting group expiration dates. Group Requester's group expiration feature automatically notifies group owners before erasing groups, and deletes them when they reach end-of-life.

#### Ownership.

Limit your risk by placing trusted group accountability in the hands of business owners, not IT. Group Requester enables you to set primary and secondary owners, while making business owners responsible for group renewals and management.

#### Add Group.

Take group lifecycle management off IT's plate. Group Requester enables self-service group management by allowing the business to request the addition of groups to your systems. It automates workflow and establishes self-service requests for everyone to create groups and email distribution lists.

## Innovative Identity Management Delivered

Avatier is defining the future by enabling business line managers to take control of the identity lifecycle and reduce risks through patented IT storefront technology with the industry's first integrated risk management engine. We automate and unify enterprise operations by standardizing business processes with an IT store. Our identity management-enabled service catalog creates a single system of record for access, asset and service requests providing full IT Audit transparency. Our easily extensible identity management system adapts to business changes through configuration rather than programming, which lowers operational costs and supports corporate governance. Avatier solutions dramatically decrease time to value and maximize operational efficiency.
